

AxonX IPD workflow

OPD → IPD CONVERSION

Doctor clicks “Admit to IPD”

System should automatically:

- Carry forward OPD data
- Diagnosis
- Vitals
- Prescriptions
- Investigation orders

IPD REGISTRATION

Now system should open:

- Admission Form

You must capture:

- Admission number (IPD No.)
- Date & time of admission
- Admitting doctor

- **Admission type:**

Emergency

Elective

BED MANAGEMENT MODULE

Very important.

System must show:

• Ward type:

- General
- Semi-private
- Private

• ICU

- Bed availability (live status)
- Bed charges auto-linked

CLINICAL MODULE (INSIDE IPD) OPTIONAL !!!!

Now comes core medical part.

■ A. Doctor Orders Section

Doctor should be able to:

- Add medication orders
- Add lab investigations
- Add radiology orders
- Add procedures
- Add diet orders

All orders auto-forward to:

- Pharmacy
- Lab

- Radiology

No manual calling needed.

B. Nurse Dashboard

Nurse sees:

- Pending medication
- IV fluids schedule
- Vitals charting
- Intake-output chart
- Pain score
- Nursing notes

Add:

- Medication administration record (MAR)
- Alert if dose missed

This is very important for NABH-type hospitals.

DISCHARGE PROCESS

When doctor clicks “Plan Discharge”:

System must:

► Check:

- Pending bills
- Pending lab reports

- Pending pharmacy clearance

Then:

► Generate:

- Discharge summary
- Final bill
- Prescription
- Follow-up date

After discharge:

- Bed auto-freed
- IPD case closed

Don't build 200 features.

First build:

- Admission
- Bed
- Orders
- Billing
- Discharge

Make it smooth.

Then scale.
